

## ImageGrid™ RIS key features include:

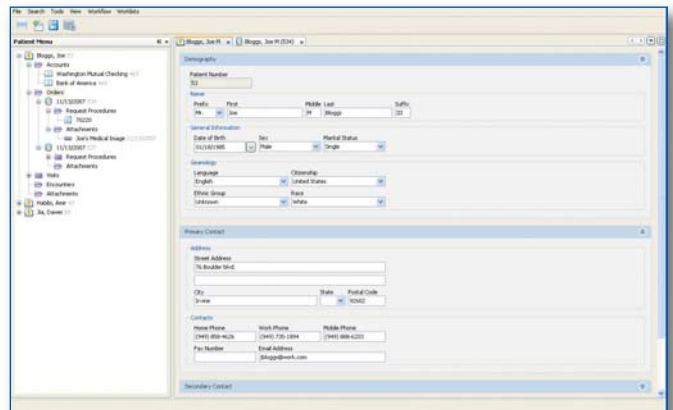

- Complete workflow-driven RIS system which captures every process from patient registration to final report delivery.
- Feature rich, easy to use order-based scheduling allowing multiple procedures to be scheduled simultaneously. Powerful color-coded user interface and flexible visit/appointment creation.
- Fast, intuitive workflow-driven patient registration and order entry.
- Ability to create digital encounters capturing patient statistics, allergies, and other medically relevant information.
- Quick and straightforward document scanner and import tool, enabling fast storage of important patient and order documents.
- Powerful free mode allowing advanced users access to the information they need efficiently, bypassing the constraints of a structured workflow.
- Built-in template based reporting system with single-click X.509 Digital Certificate signing, printing, faxing, and exporting (to PDF) capabilities.
- Powerful radiologist workflow including integration with IGViewer, built-in dictation, and fast report viewing.
- Compatible with leading transcription pedals, which integrate with transcription workflow.
- Powerful administrator user interface allowing customization of all aspects from procedure creation, facility creation, staff roles, pre-configured data, etc.
- Multi-user aware system with internal or remote LDAP server (including Active Directory) authentication and application customizations based on user's role.
- System allows remote login, with HTTP tunneling capabilities.

## ImageGrid™ RIS

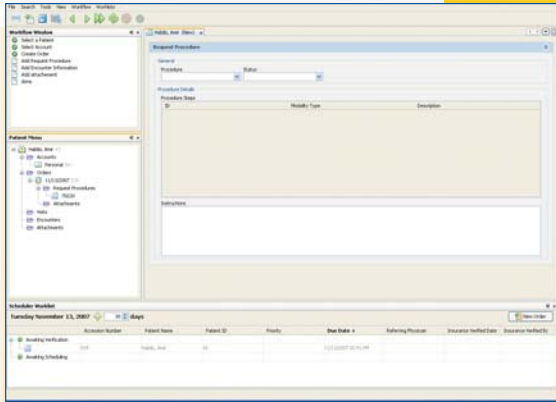

Candelis has expanded the capabilities of its ImageGrid™ PACS Appliance with the addition of a cost effective, feature-rich and fully integrated **ImageGrid™ RIS** (IG RIS). IG-RIS is designed to streamline and improve the workflow of a radiology environment. As a web-enabled application residing on the ImageGrid PACS appliance, the RIS module allows radiologists, technologist and staff to better manage and access patient data and information from a single platform. ImageGrid RIS can be accessed from any workstation on a Local Area Network, Wide Area Network or remote workstations via a Virtual Private Network connection.

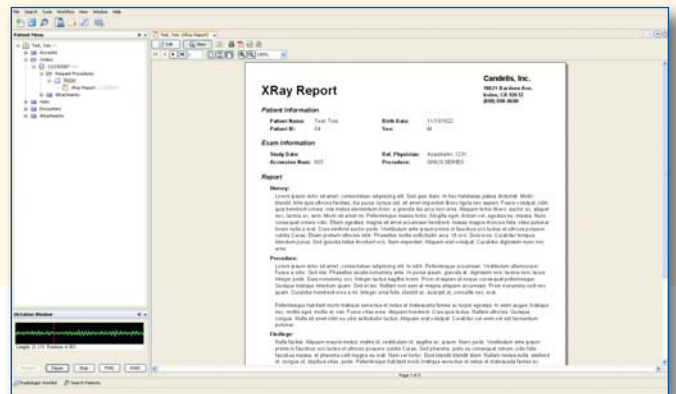

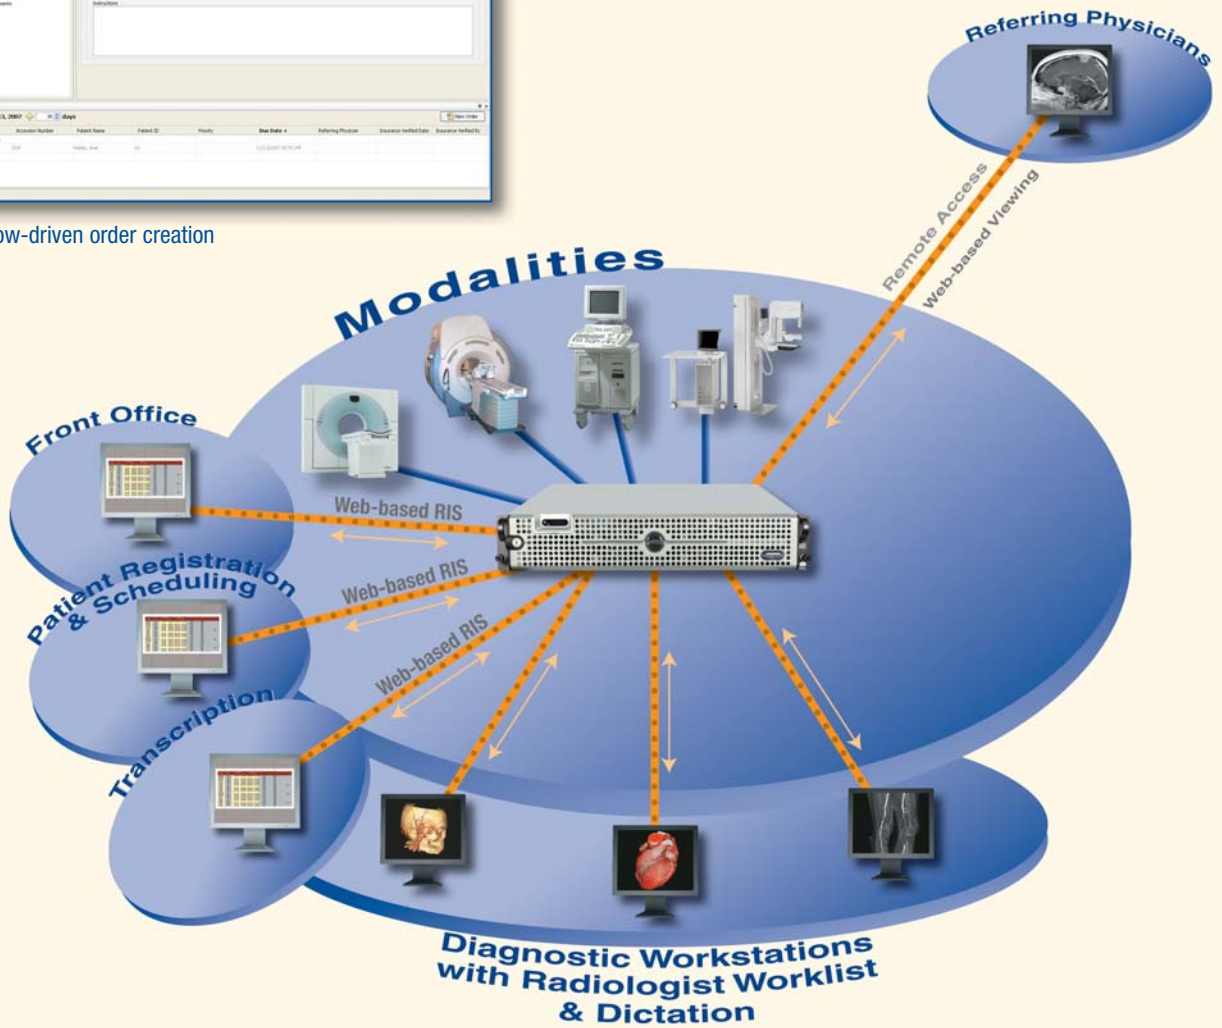

Color coded scheduler showing multiple resources and appointments

Powerful free mode for fast access to patient information

Workflow-driven order creation

Reporting module for playback of dictations and report creation all in the same window
